Project Name	Voice-Based Concept Understanding Analyser
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Upload & Input	Stage 2 Analysis & Evaluation	Stage 3 Results & Feedback
Actions <i>What does the customer do?</i>	- Select a concept reference. - Record or upload audio explanation. - Click "Analyze" to start evaluation.	- System transcribes audio. - Extracts audio features and generates embeddings. - Compares explanation with reference and computes scores.	- View transcribed explanation. - Check similarity scores, filler word ratio, and confidence. - Visualize waveform. - Download PDF report.
Touchpoint <i>What part of the service do they interact with?</i>	- Home / Upload Page - Concept Reference Section - Audio Uploader & Record Button - Analyze Button	- Processing Indicator - Transcription Module - AI Evaluation Engine - Waveform Generator	- Results Dashboard - Metrics & Feedback Section - Waveform Player - PDF Download Button
Customer Thought <i>What is the customer thinking?</i>	- Which concept should I choose? - Is my audio clear enough? - Will the system understand my explanation?	- How is the system analyzing my explanation? - Is the transcription accurate? - How well does my explanation match the concept?	- How did I perform? - What can I improve? - Can I share or download this report?
Customer Feeling <i>What is the customer feeling?</i>	- Curious and motivated - Slightly anxious about recording - Hopeful for useful feedback	- Interested during processing - Eager to see results - Hopeful for accurate evaluation	- Satisfied with insights - Motivated to improve - Confident after seeing progress

Process Ownership <i>Who is in the lead on this?</i>	Developer / System (Handles UI, upload, and session management)	AI & Backend Engine (Handles transcription, feature extraction, and evaluation)	Developer / System (Handles results display, report generation, and feedback)
Opportunities <i>How can we improve this stage?</i>	• Simplify the upload process with drag & drop and format validation. • Provide clear instructions and concept preview. • Add real-time upload status and error handling.	• Improve transcription accuracy with better models. • Optimize processing time and show progress indicator. • Enhance scoring logic for more accurate evaluation.	• Present results in a clean, easy-to-understand format. • Highlight key insights and improvement tips. • Enable easy PDF sharing and export options.
