

Project Executable Files

Date	5 July 2026
Team ID	–
Project Name	Voice-Based Concept Understanding Analyser
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes https://voice-concept-analyser.onrender.com
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes https://drive.google.com/file/d/voice-analyser-demo

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Voice-Based-Concept-Understanding-Analyser/	
app.py	
requirements.txt	
README.md	
.env	
static/	
css/	
js/	
images/	
templates/	
index.html	
result.html	
about.html	
uploads/	# Uploaded audio files
model/	
model.pkl	# Trained ML model
vectorizer.pkl	# Feature vectorizer
label_encoder.pkl	# Label_encoder
dataset/	
concepts_dataset.csv	# Training dataset
utils/	
speech_to_text.py	# Speech recognition module
preprocessing.py	# Text preprocessing
prediction.py	# Prediction and scoring
text_processing.py	# Text processing utilities
Dockerfile	# Docker configuration

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	http://127.0.0.1:5000 (Localhost)
Login Credentials (Demo)	Not Required (Public Access)
Platform / Hosting Provider	Localhost (To be deployed on Render)
Repository Link	https://github.com/your-username/voice-concept-analayer
Demo Video Link	https://drive.google.com/file/d/1AbcDefGhIjKlMnOpQRStuVwxyz/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:	
- Python 3.9 or higher - pip (Python package manager) - Git - Microphone (for voice input) - Internet connection (for speech recognition)	
Step 1: Clone the repository	<code>git clone https://github.com/your-username/voice-concept-analayer.git</code>
Step 2: Navigate to the project directory	<code>cd voice-concept-analayer</code>
Step 3: Install dependencies	<code>pip install -r requirements.txt</code>
Step 4: Copy environment file and update if required	<code>copy .env.example .env</code> (Windows) <code>cp .env.example .env</code> (Linux / Mac)
Step 5: Run the application	<code>python app.py</code>
Step 6: Open your browser	<code>http://127.0.0.1:5000</code> # The application will be running on the above URL
Step 7: Allow microphone access, speak a concept and get the analysis result.	
Default Admin (if any future admin panel is used):	
- Username: admin - Password: admin123	

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Speech recognition accuracy may decrease in noisy environments.	Use in a quiet environment and speak clearly.
2	Requires stable internet connection for Google Speech Recognition API.	Ensure active internet connection.
3	Currently supports only English language input.	Multi-language support will be added in future update.
